Winter Maintenance for Undercounter Ice Makers

Seasonal Preparation Quick Guide

Ensure your undercounter ice maker survives the cold months without costly damage. Use this guide to determine your winter strategy and properly maintain your appliance.

Assess Your Setup

- Heated Indoor Room: Safe to run normally year-round.
- Unheated Garage/Outdoor: Must be winterized before the first freeze.
- Check manufacturer guidelines for specific ambient temperature limits.

Indoor Unit Maintenance (Active)

- Deep clean the interior and descale all components.
- Replace water filters to ensure fresh, clean ice.
- Vacuum dust and debris buildup from the condenser coils.
- Flush any stale water from the internal reservoir.

Outdoor Unit Shutdown (Inactive)

- Turn off the power supply to the ice maker completely.
- Shut off the main water supply valve to the unit.
- Drain all water from lines, valves, and the reservoir.
- Clean and dry the interior completely to prevent mold growth.

Contact ASAP Appliance Repair for professional winterization and repair services.
